NATURAL SPAWNER ODDS

COMPONENT ROLLS

The component rarity rolls used when a natural Spawner is mined.

WHICH PARTS ARE ROLLED?

- Motor, Power Cell, Heater or Cooler, and Drop Filter each receive their own rarity roll.
- The mob decides the DNA and whether the thermal component is a Heater or Cooler.
- The DNA is not rolled. A Loot Processor is always included.
- All results are saved when the natural Spawner is mined and can never be rerolled.
- The saved Spawner can then be disassembled one component at a time in the Assembly Machine.

RARITY ROLL - EACH COMPONENT

RARITY	WEIGHT	CHANCE
Normal	100	37.04%
Uncommon	80	29.63%
Rare	50	18.52%
Epic	25	9.26%
Legendary	15	5.56%

Each component rolls separately. Chances are calculated from the five relative weights (total weight: 270).
